

TRONIX

FUTURES

## **What is Tronix Futures:**

Tronix Futures is a new and unique innovative protocol by the Tronix Network on the Tron block chain.

The Tronix Futures have features never seen before that allow investors to hold tokens following an underlying asset traded on the real markets.

The innovative technology consists in a token that can retrieve the live price of an asset being traded on JustSwap exchange, but also on other exchanges.

The token will adjust it's own balance automatically according to the variations of price of the underlying asset .

For example, the first token issues, called Tronix Futures TRX-USD(TRONIXTUSD), follows the TRX/USDT exchange price on JustSwap as underlying asset.

When investors hold the token, its balance will automatically decrease when the price TRX to USDT goes down, and it will increase when the TRX is gaining against USDT.

All of this happens live, and it's updated live on your wallet.

As long as the tokens are stored in a wallet, they will automatically update their balance depending on the market moves.

The process of balance update is frozen when tokens are stored in the JustSwap exchange, because due to the extremely sophisticated protocol of the Tronix Futures token, certain platforms are not able to keep the balance updated.

There will be a series of Tronix Futures that will cover all types of assets and markets. The possibilities are unlimited.

Soon we will integrate a direct exchange between Tronix token (TRONIX) and the Tronix Futures, so that investors who are staking TRX to mine TRONIX will be able to choose if they want to operate on the Tronix Futures with TRX or TRONIX.

The new protocol invented by the Ozmode Team for Tronix, has unlimited applications and it's revolutionary. We start with Tronix Futures but there will be more application in the near future.

Another big change Tronix is planning on making, is to incorporate as a company and give the opportunity to the investors to get shares of the company in exchange of TRONIX tokens.

## **Distribution plan:**

The first Tronix Futures token will be available to purchase for TRX on the Tronix website at a fixed price of 10 TRX during the presale phase that will last 1 week.

After that, the smart contract AI will automatically fetch the price of the token on the JustSwap pool, then the remaining tokens will be sold according to that price, until all the total supply of 99,999 tokens is purchased.

Due to the volatility of the underlying assets, the total supply could be reached and it will be not possible to mint new tokens, but in case of a notable change of price, the total supply might shrink and make new token available to be purchased.

# Technical info of the Ozmode AI protocol for Tronix Futures Network:

TRC20 Tronix Futures Tokens

Max supply (for purchase) 99,999 (+ 6 decimals on the SC)

Total supply: Variable, increases and decreases.

Admin can pause transfers for security purposes.

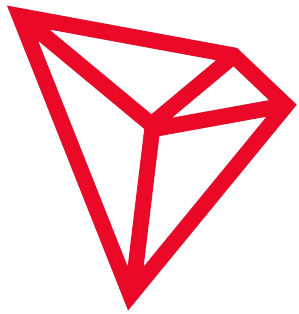

Admin can block addresses in case of theft or fraud.

Admin can refund tokens to the legit owner in case of theft or fraud.

Admin can block trading on JustSwap in case of security issues.

Admin can enable other smart contracts to operate the AI.

Admin can whitelist or blacklist smart contracts from price updates.
